

Võ Tấn Nguyên

Java Software Engineer

PROFESSIONAL SUMMARY

Backend Engineer with 4+ years of experience developing scalable microservices for banking and enterprise systems. Experienced in Core Banking workflows, event-driven communication, and distributed backend services using Quarkus, Spring Boot, Apache Camel, Kafka, and Redis. Experienced in designing transactional workflows, centralized error handling, dynamic route configuration, and secure message processing. Passionate about building maintainable, resilient backend systems optimized for high concurrency and real-time processing in Agile environments.

TECHNICAL SKILLS

Programming Languages	Java (8+), JavaScript, SQL, HTML, CSS, XML
Frameworks & Libraries	Spring (MVC, Boot, Security), Hibernate, JPA, Maven, Quarkus, Apache Camel, JasperReports, Redis, Jmix, Kafka
Tools & Platforms	Eclipse, TortoiseGit, Jira, Docker, Jasper, Postman, Tomcat, SonarLint, Jasper Studio, IntelliJ, Mockoon, Prometheus, Grafana
Databases	Proficient in SQL Server, experienced in schema design, indexing, transaction management, stored procedures and query optimization
Development Practices	Agile, CI/CD, RESTful API Development, Version Control

WORK EXPERIENCE

BC Card Viet Nam

March 2025 – Present

Java Software Engineer

- Designed and developed a microservices-based Core Banking system handling millions of requests per day across internal banking services.
- Built dynamic Camel integration flows using YAML + Java DSL, reducing manual integration effort by ~60%.
- Standardized processor architecture, eliminating duplicated business logic and reducing error-handling code by ~70%.
- Implemented Redis caching layer, improving API response time by 30%+ under high-load scenarios.
- Leveraged Redis Pub/Sub and Streams to enable asynchronous communication across distributed services.
- Applied Author-then-MAC security mechanism to ensure integrity and authenticity of transactional messages.
- Implemented scheduled jobs and automated reporting workflows for operational processes.

Key Achievements:

- Contributed to building a scalable transaction processing module supporting high-concurrency internal banking operations.
- Improved system maintainability and reduced onboarding time through standardized backend architecture.
- Strengthened reliability via centralized exception handling and event-driven design.

DXC Technology Service Vietnam

Jan 2022 – March 2025

Analyst Software Engineering

- Developed and maintained enterprise insurance platforms supporting large-scale daily policy and claims transactions.
- Improved backend performance by 20% through query tuning, indexing strategies, and transaction optimization.
- Reduced batch job execution time by 25%, improving operational efficiency.
- Contributed to maintaining 99%+ system uptime in production environments.

PROJECTS

Core Banking Microservice Platform

Design a payment system for the domestic credit card that will be issued in the near future.

Team Size: 3 | Role: Lead Developer

Tech stack: Quarkus, Apache Camel (YAML + Java DSL), Redis (Cache, Pub/Sub, Streams), Oracle, JPA/Hibernate, JasperReports, Event-driven Architecture, Data Encryption.

Responsibilities:

- Designed and developed key components of a modular microservice platform handling millions of transactional requests per day.
- Designed dynamic Camel route configuration via YAML, reducing integration change effort by ~60%.
- Implemented standardized processing framework and centralized exception handling, reducing duplicated logic by ~70%.
- Applied Redis caching and asynchronous messaging to improve response time by 30%+ under peak load.
- Designed secure transaction pipeline using Author-then-MAC to ensure integrity and authenticity of sensitive payment data.
- Built automated reporting workflows with file monitoring and real-time PDF generation using JasperReports.

Vikki Bank Core Banking

Enterprise Core Banking system supporting customer onboarding, account lifecycle management, and transaction processing.

Program Size: 150+ | Backend Team: 50+ | Payment Team: 20 | Role: Backend Developer

Tech stack: Jmix, Spring Boot, Microservices, Apache Kafka, Redis, PostgreSQL, JPA/Hibernate, Docker.

Responsibilities:

- Developed core banking modules supporting high-volume account and transaction processing.
- Implemented Kafka-based event-driven communication for reliable inter-service transaction events.
- Applied Redis caching to reduce repeated database reads and improve response latency in high-concurrency scenarios.
- Designed RESTful APIs optimized for ACID-compliant transactional consistency.
- Participated in performance tuning, database optimization, and production deployment for containerized services.
- Monitoring service with Prometheus and Grafana.

Insurance Enterprise Platforms (GGI Tokio Marine, MSIG Indonesia, PGA Philippines)

Large-scale insurance systems for policy management, claims processing, and internal operational workflows.

Team Size: 3–25 | Role: Developer / Lead Developer

Tech stack: Spring Boot, Spring MVC, Hibernate, JPA, RESTful APIs, Batch Jobs, Quartz, SQL Server, JasperReports.

EDUCATION

Industrial University of Ho Chi Minh City

2017 – 2022

Software Engineering

CERTIFICATIONS

Agile Software Development: Scrum for Developers | 2024

TOEIC – 635 | 2024

HONORS & AWARDS

Star Award – DXC Technology | Q4 2024

Best Team Awards – DXC Technology | Q1 2024
